▼ **MQ-8B FIRE SCOUT**

Regardless of the requirement, the MQ-8B Fire Scout Vertical Unmanned Aircraft System (VUAS) is ready to deliver. Fire Scout gives services an unprecedented ability to see, interpret, and respond to tactical threats at sea or ashore. With eight hours endurance and a 20,000-ft. ceiling, Fire Scout operates from any air-capable ship, mobilizing up to 600 lbs. of radars, weapons, electronic countermeasures, and SIGINT modules. Already on contract with the U.S. Navy, the MQ-8B Fire Scout will dramatically expand capacity to gather intelligence and support the warfighter.
