▼ **NATO AGS**

NATO is acquiring an airborne ground surveillance capability to provide a clear picture of ground activities essential to both deployed forces and decision-makers. Regardless of where NATO operates, NATO AGS will be vital to the full range of Alliance missions—from force protection and counter-piracy to border security and humanitarian relief. Relying on Global Hawk's proven capabilities, NATO is working with Northrop Grumman and its transatlantic industrial team to provide a truly transatlantic solution and the earliest possible capability to NATO forces. *Northrop Grumman NATO AGS—the height of ISR knowledge.*
